

Steps for Downloading Handheld Applications

1. Go to a site to download applications. Here's one that I have - <http://www.center.k12.mo.us/edtech/handhelds/HHweb.htm>

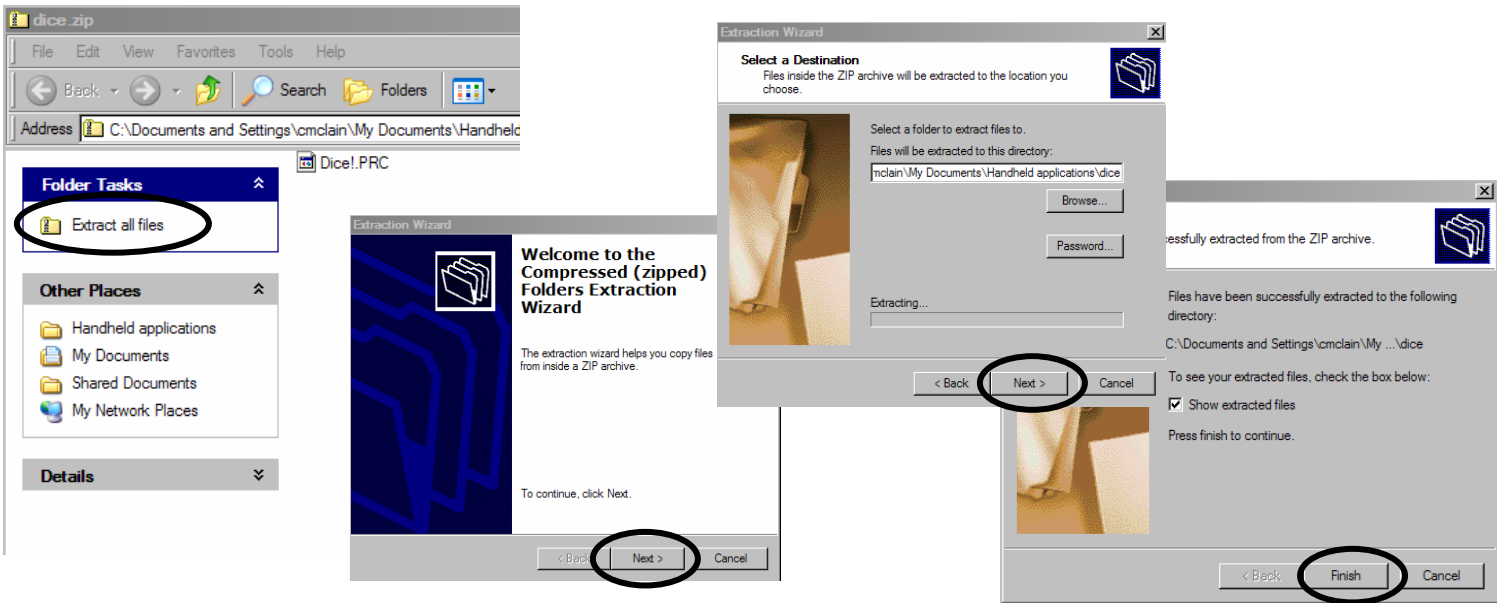

2. Find the download link at the site. Click on it and select "Save" from the download menu. Then save the application to a place where you will be able to find it later! (I suggest making a folder in your My Documents.)

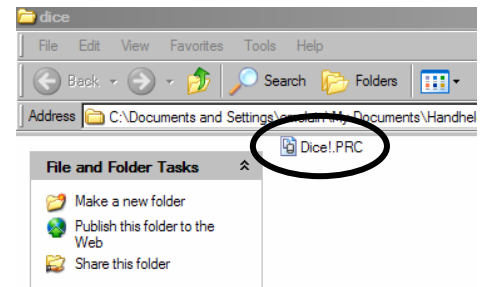

3. After you have the application saved, you will get a download complete screen. Click "Open" to actually open the application.

- If it was a zipped file (the file name ends in .zip), you will need to extract the files. Just click on "Extract all files". A wizard to help you extract the files will open. Click "Next", then "Next", then "Finish".

- Finally, you should see the .prc file. Double click it and it will automatically put itself into the Quick Install file.

- The Confirm Add window opens where you need to do just that – confirm that you really want to add this application to your handheld. Click "OK" on the Confirm Add window.

- Follow steps 1 – 6 if you want to install another application or sync your handheld!
