

## Did you know you can change the color of the stylus menu?

1. Select the stylus menu.
2. Select the color you want to change.
3. Select the Properties tab.
4. Select Line Style.
5. Finally, select the desired color, thickness and line style.
6. Click Save Tool Properties.

Potentially you could change all the solid and hashed lines in this same manner. Now in addition to the four colors of styluses on the pen tray, there are up to 6 additional colors.

To use your new color options, you will need to select the stylus menu and annotate or write with your finger.
