

My Content – here's what to do

After taking the time to develop your text coding features, (transparent rectangles/images, thought bubbles, etc) save it!

Go to gallery; click the drop down menu from My Content; select New Folder; name it.

Drag your transparent shapes, bubbles, etc to the folder and drop them there. (It will almost look like this won't work – do it anyway!)

Now when you are ready to use the features, click your developed folder, expand the pictures and select the feature. (Think of this as taking the place of infinite cloning.)
