

# SMART Notebook Print Capture

Open your document in Word. Be sure to format all the text and size of the font in the Word document.

When you are ready to capture the document, in Word go to "**File**" then "**Print**". In the print window that pops up, at the end of the box with the name of your printer is a drop down arrow. Click the arrow and select "**SMART Notebook Print Capture**" then "**OK**". This will automatically put the document into Notebook for editing purposes.

And now . . . .

Finally, click on the open Notebook file at the bottom of your screen to interactively use the Word document in Notebook. (If Notebook was not open before you started, it will be now.)
